WAM is a registered investment advisor, not affiliated with any parent organization. The firm maintains a complete list and description of composites, as well as policies and procedures for valuing, calculating, and preparing this disclosure, which are available upon request. Results for the full historical period are time weighted. Composites have been valued monthly and portfolios have been weighted using beginning of month market values plus weighted cash flows. WAM defines significant cashflows as 10% of the total market value for all periods though 2015. As of Q1 2016, composite portfolios are valued daily. Trade date valuations are used in rate of return calculations. All returns are U.S. Dollar denominated. No alteration of composites as presented here has occurred because of changes in personnel or other reasons at any time.

Results are based on fully discretionary accounts under management, including those no longer with the firm. Total firm assets include mutual fund accounts not utilizing individual stock and bond selection. A separate composite is maintained for those assets. Results are presented after the deduction of transaction costs and custodial fees. The composite dispersion of annual returns is dollar weighted standard deviation as measured by the range between the highest and lowest performing portfolios in the composite. The standard deviation in annual composite returns = 19.98% for WAM's equity composite versus a standard deviation in the yearly benchmark historical returns of 19.33%. 3 year annualized standard deviation is 19.72% for WAM's equity composite versus 20.58% for the benchmark.

The maximum quarterly management fee is 0.25%. The standard advisory fee schedule, payable quarterly, for assets in an account being held for permanent investment in equities is: 1% of the first \$5,000,000 of market value, <sup>7</sup>/<sub>8</sub> of 1% of the next \$5,000,000, <sup>3</sup>/<sub>4</sub> of 1% of the next \$5,000,000, and <sup>1</sup>/<sub>2</sub> of 1% of the balance. WAM has no performance based fee arrangements. Client's return will be reduced by the advisory fee and any other expenses it may incur in the management of an investment advisory account. Beginning March 2010, our minimum is \$1,500,000 per relationship to qualify for asset management. Individual accounts below this minimum may be included in the definition of firm assets and in composites as they are part of a larger relationship fulfilling the required minimum account size.

The Equity Composite is for mid to large cap value and is compared to the S&P 500 total return index, which is a market-cap weighted index of 500 stocks designed to represent the broad domestic economy. The volatility of the index may be materially different from that of WAM's composite. WAM's holdings may differ significantly from the securities that comprise the index as WAM's strategy utilizes Domestic Mid Cap, International Equity and ETF securities (as of 12/31/22- 1% Midcap, 7% International Equities, and 15% ETF'S). In addition, some accounts utilize a covered call strategy in which calls are written generally less than 10 times per annum.

Leverage is utilized by a small number of accounts and is mandated by client for personal cash flow reasons. For accounts utilizing margin, returns have been restated to an all cash basis and are used as the only reported return thru 2000. For 2001 and forward no restatement of returns was made. WAM's portfolio accounting system utilizes multiple pricing sources and WAM regularly compares outside sources to that of the custodian.

The equity composite reflects the equity only accounts, and the equity only portion of the balanced accounts. 98% of accounts in the composite are balanced accounts.

The composite performance represents the performance of an aggregate of the firm's managed accounts that align with a particular strategy. Individual account performance will vary and some clients may have experienced returns significantly different from the composite. Investing entails risk and past performance is not necessarily an indication of future results, and no representation is made that future rates of return will be comparable.
